

1. QUICK START GUIDE

Thank you for purchasing the **Stylized Anime Combat Fire VFX Pack**. This package includes 10 production-ready, cel-shaded fire visual effects built specifically for action games and RPG combat systems.

1. Open your Unity project (configured with Universal Render Pipeline / URP).
2. Navigate to `Assets/StylizedAnimeFireVFX/Scenes/` and open `DemoScene.unity` to inspect all 10 pre-configured VFX.
3. To use in your game, simply drag and drop any prefab from `Assets/StylizedAnimeFireVFX/Prefabs/` directly into your scene or attach it to your character's sockets/animator events.

⚠ CRITICAL STEP: URP Render Pipeline Configuration

Some effects in this pack utilize soft particles (depth fading) and screen intersections. If you notice gray/opaque squares around the particles in your scene, follow these quick steps:

1. Select your active **URP Asset / Universal Renderer Asset** in the Project window (found under Project Settings > Graphics or Quality).
2. In the Inspector, under **Rendering**, check and activate **Depth Texture**.
3. Also ensure **Opaque Texture** is enabled for proper distortion and blending.

2. CUSTOM MASTER SHADER PROPERTIES

All visual effects in this package share a single, unified **Shader Graph Uber Shader**. You can easily tweak any material in the Inspector without needing to open or modify shader code.

Texture 1 & Texture 2 (Layering)

- Tx1_Scale / Offset** : Controls main texture tiling & position.
- Tx1_PanSpeed** : Controls UV panning speed (X/Y).
- Tx1_Distortion_Strength** : Adds distortion to main texture.
- Use_Mult_Texture** : Enables/Disables secondary overlay texture.

Dissolve (Erosion & Alpha Mask)

- Use_Dissolve** : Toggles erosion map.
- Dissolve_Map_Tx** : Texture mask used for burning out edges.
- Dissolve_Softness** : Adjusts hard edge vs. smooth alpha fade.

Color Ramp (Multi-Color Control)

- Use_Color_Ramp** : Toggles custom 3-step color ramping.
- Color_Lows** : Base dark color (e.g. Dark Red / Crimson).
- Color_Middles** : Mid-tone core color (e.g. Orange / Flame).
- Color_Highs** : Hot inner core color (e.g. Bright Yellow / White).
- Middle_Lows / Highs** : Sliders to balance color thresholds.

Fresnel & Depth Fade

- Use_Fresnel** : Enables outer rim lighting/glow.
- Fresnel_Color_Power** : Controls rim sharpness & color.
- Use_Depth_Fade** : Enables soft particle fading near geometry.
- Depth_Fade_Distance** : Controls soft edge fade distance.

Flowmap & Distortion

- Use_Flowmap** : Enables directional fluid motion.
- Flowmap_Panning / Amount** : Adjusts fluid flow speed and intensity.
- Distortion_Noise_Tx** : Noise map for heat wave distortion.

3. RECOMMENDED LIGHTING & POST-PROCESSING

To achieve the exact vibrant, glowing anime look shown in the showcase materials, configure your scene with the following post-processing volume settings:

✦ Recommended Global Volume Settings

Override Component	Property	Recommended Value	Purpose
Bloom	Threshold	0.39	Triggers bloom only on high-intensity HDR colors.
	Intensity	1.41	Gives fire cores a strong, clean glow.
Vignette	Intensity	0.30 (Smoothness: 0.2)	Focuses player attention on combat center.
Tonemapping	Mode	ACES	Ensures rich saturation without blowing out highlights.
Color Space	Project Settings > Player	Linear	Mandatory. Avoid Gamma color space for correct HDR blending.

4. INCLUDED PREFABS LIST

Prefab Name	Category / Type	Description
FX_Fire_Slash	Melee Attack	Custom 3D mesh slash with sweeping fire trail.
FX_Fire_Projectile	Ranged Skill	Moving fireball with trail and particle ember tail.
FX_Fire_Impact	Hit Effect	Burst impact for weapon collisions or spell hits.
FX_Fire_Tornado	Area / Hero Skill	Swirling vertical fire vortex with floor rings.
FX_Fire_Shield	Defense	Circular fire barrier protecting character center.
FX_Fire_BurningZone	Ground AoE	Persistent ground flame hazard area.
FX_Fire_AoE	Area Attack	Radial explosion/outburst surrounding character.
FX_Fire_Wall	Environment / Skill	Linear flame wall barrier.
FX_Fire_Muzzle	Cast / Launch	Frontal flash for staff or projectile launch.
FX_Fire_Loop	Looping Flame	Continuous flame loop for torches or objects.
